PURCHASERS of the BOTANICAL MAGAZINE who have an opportunity of choosing the mode of arranging the articles, will do well to consider, before they send them to the book-binders, which mode will be most advantageous to them.

There are three ways of arranging the Work.

1. *In the order in which they were published;* which being the way in which the Work must necessarily be quoted, has the advantage of a ready reference to the article quoted.

2. *In the systematic order, as pointed out in the Systematical Index.* This mode will be found best suited to the scientific Botanist, or to such as wish to become so; the former will readily find what he wants without the necessity of looking into the Index, and the Student will find the greatest advantage in having all the genera disposed in their proper classes and orders, and the species of each genus brought together. In both these modes, the letter-press and plates may be bound together, or separately, as may best suit the taste of the owner.

3. *The plates may be bound according to the systematic arrangement, and the letter-press according to the order of publication.* This mode will, in some measure, combine the advantages of the other two, and will be found most convenient; provided the trouble is taken to add the name to each figure, and the number, as prefixed in the Systematical Index, both to the figure and to the letter-press belonging to it.

N. B. The letter-press, bound separately, will make seven good-sized volumes,—six volumes in each.

PREFACE.

IN submitting the following INDEXES to our Readers, we thankfully acknowledge the assistance we have received from Mr. HARROP, of *Manchester*, who kindly transmitted to us a copious index, compiled for his own use, containing not only the names of the plants, as given in the Botanical Magazine, but of their synonyms also. By the aid of this index we have been enabled to render this part of our labours more complete than it would have otherwise been. We have, however, thought it would add more to bulk than to usefulness, to insert the synonyms of the older authors, prior to Linnæus's happy invention of trivial names.

It was from Mr. HARROP's suggestion, that we have been induced to add the adopted names to the synonyms; which will not only save the trouble of referring to the work itself to find its approved appellation, but even to those who do not possess the Botanical Magazine, may be found useful, especially to purchasers of plants, by preventing their giving orders for the same under different names, an inconvenience, which we have been assured frequently occurs, more especially in the country.

That we might increase the bulk of the index as little as possible, we have placed the adopted name under the synonym, prefixing the word *est*, instead of inserting it in a different column. By so doing, however, we suspect that at first sight, our index will appear somewhat confused, but the difficulty will be easily got over by observing, that the line will always lead the eye to the true alphabetical arrangement of the species, the intervening names having no line prefixed. The synonyms are printed in Italics; and where the approved name is different from the one under which the plant was published in the Magazine, the latter name is inserted beneath, between brackets. In the same manner, when the name adopted

in the Hortus Kewensis is different from the one in the Magazine, the former is inserted within brackets, with the letters H.K. under the latter.

We have preferred making our Indexes include forty-two, rather than only forty volumes, because those who choose to bind up the plates and letter-press separately will find, that six volumes of the latter will make one of a convenient size, and the whole will be comprehended in seven equal volumes. We rather recommend the binding the plates according to the systematic arrangement, and the letter-press numerically, as published. It will be useful, to students particularly, to have all the species of the same genus arranged together, and the figures on the plates will refer readily to the letter-press.

The second part is in great forwardness, and will be published with as little delay as possible, containing 1st, the systematic arrangement; 2d, a list of the plants which have different names in the last edition of the Hortus Kewensis from those under which they are published in the Botanical Magazine; and 3d, an enumeration of the whole in numerical order with corrections.

ADVERTISEMENT.

PURCHASERS of the BOTANICAL MAGAZINE who have an opportunity of choosing the mode of arranging the articles, will do well to consider, before they send them to the book-binders, which mode will be most advantageous to them.

There are three ways of arranging the Work.

1. *In the order in which they were published;* which being the way in which the Work must necessarily be quoted, has the advantage of a ready reference to the article quoted.

2. *In the systematic order, as pointed out in the Systematical Index.* This mode will be found best suited to the scientific Botanist, or to such as wish to become so; the former will readily find what he wants without the necessity of looking into the Index, and the Student will find the greatest advantage in having all the genera disposed in their proper classes and orders, and the species of each genus brought together. In both these modes, the letter-press and plates may be bound together, or separately, as may best suit the taste of the owner.

3. *The plates may be bound according to the systematic arrangement, and the letter-press according to the order of publication.* This mode will, in some measure, combine the advantages of the other two, and will be found most convenient; provided the trouble is taken to add the name to each figure, and the number, as prefixed in the Systematical Index, both to the figure and to the letter-press belonging to it.

N. B. The letter-press, bound separately, will make seven good-sized volumes,—six volumes in each.

SYSTEMATICAL INDEX,

IN WHICH

The Plants contained in the First Forty-Two Volumes of the Botanical Magazine are arranged systematically.

N. B. In the following Index, the Plants are, in general, arranged according to the System of Linnæus, and in the order adopted in the Hortus Kewensis; but it has been thought right to make some few changes, by which the unnecessary separation of Plants of the same natural family has been sometimes prevented. Thus the genera Patersonia, Sisyrinchium, Ferraria, Tigridia, and Galaxia, which in the Hortus Kewensis are placed in Monadelphia Triandria, are in our arrangement combined with the Class Triandria; by which means the Plants of the natural order of Ensatæ, so successfully laboured by our able coadjutor in these volumes, John Bellenden Ker, Esq. are kept together. Similar changes are made in some other instances, which will be found to be noticed as they occur.

As, in the progress of science, many of the names have been altered since the publication of the figures, those of the Hortus Kewensis, a work considered of the first authority, generally stand first, and the names under which the Plants were published in the Magazine are inserted below within brackets. But it may be observed, that many of these changes were first made in the Magazine, by Mr. Ker (formerly Gawler, whence the signature G.) and afterwards adopted in the Hortus Kewensis, as has been generally the case in the natural orders of *ensatæ* and *liliaceæ*. In the few cases where the name adopted in the Hortus Kewensis is placed within the brackets and printed in italics, it is designed to mark a preference of the name above it. And where both the first name and

that within the brackets are printed in roman letters, it is meant not to determine which is to be preferred, as it may be doubted whether some of the new genera, adopted in the Hortus Kewensis, will be acknowledged by Botanists in general.

Omit the synonym of Parkinson, which belongs to Nigella hispanica, and insert *Mill. Icon.* 187. *f.* 2.

* A Numeral Index, denoting the order and Time of publication, is far from being useless, even to such as choose to bind up their volumes in the same order; but must be indispensable to those who prefer any other arrangement; because, when the regular order is once disturbed, all reference to numbers becomes unavailable.

† To avoid confusion, we use the word *Fasciculus*, to denote the quantity published at one time; and when *Number* is referred to, it always means the number of the plate or the text accompanying it.
